

We have two credentials

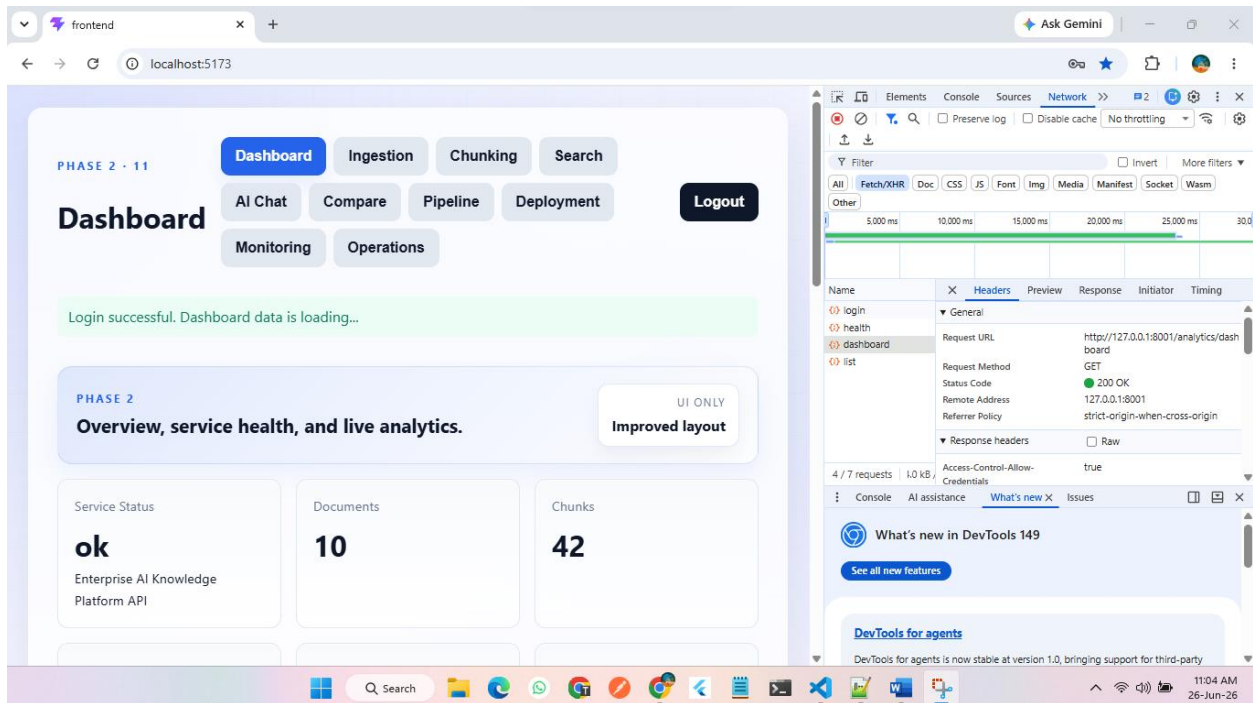

Admin / Contributor implemented with JWT token

The screenshot shows the application dashboard at `localhost:5173`. The dashboard is titled "PHASE 2 · 11" and includes a "Logout" button. A green message bar indicates "Login successful. Dashboard data is loading...". The main content area is titled "PHASE 2 Overview, service health, and live analytics." and includes a "UI ONLY Improved layout" button. The dashboard displays several metrics: Service Status (Loading...), Documents (0), Chunks (0), Embeddings, Search Volume, and Retrieval Quality. The network log on the right shows a successful login request with a 200 ms response time and a payload containing the username "admin" and password "password123".

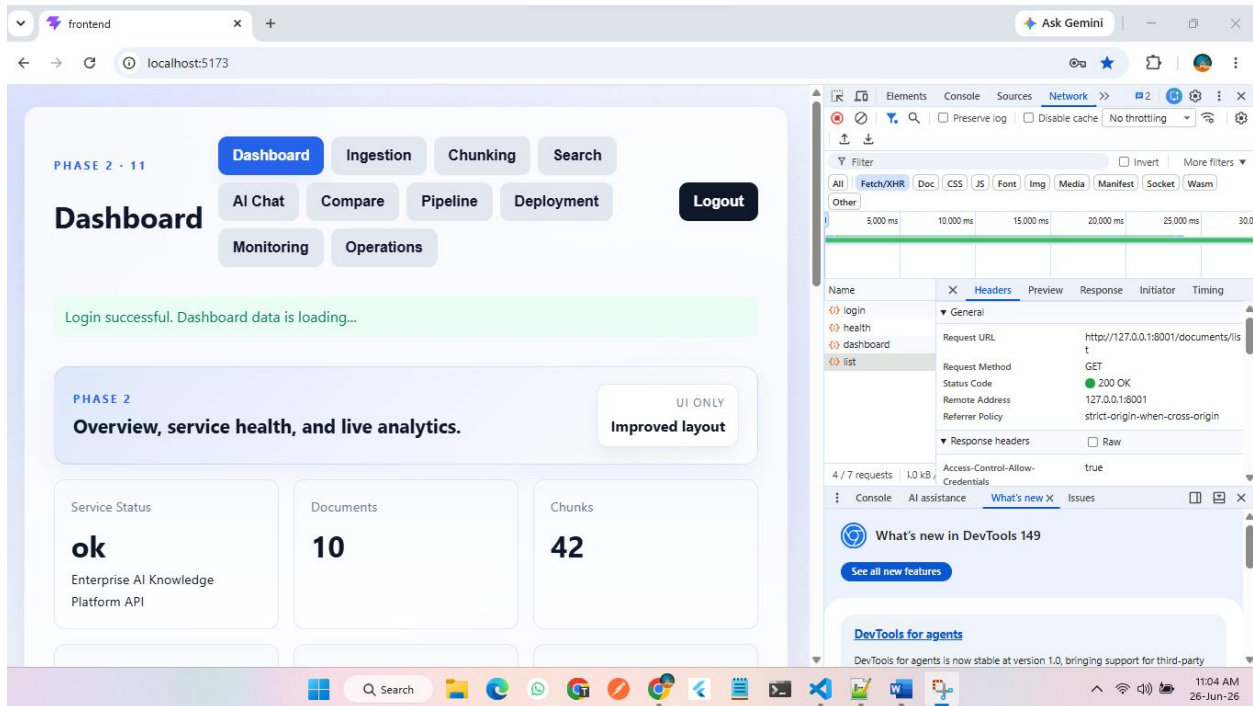

Health API is also working fine

The screenshot shows the application dashboard at `localhost:5173`. The dashboard is titled "PHASE 2 · 11" and includes a "Logout" button. A green message bar indicates "Login successful. Dashboard data is loading...". The main content area is titled "PHASE 2 Overview, service health, and live analytics." and includes a "UI ONLY Improved layout" button. The dashboard displays several metrics: Service Status (ok), Documents (10), Chunks (42), Embeddings, Search Volume, and Retrieval Quality. The network log on the right shows a successful health check request with a 200 OK status and a response time of 200 ms. The response headers include "Access-Control-Allow-Credentials: true".

Dashboard list

Implemented the document list API in the dashboard and its health is also fine

With chunking details and embeddings details added
