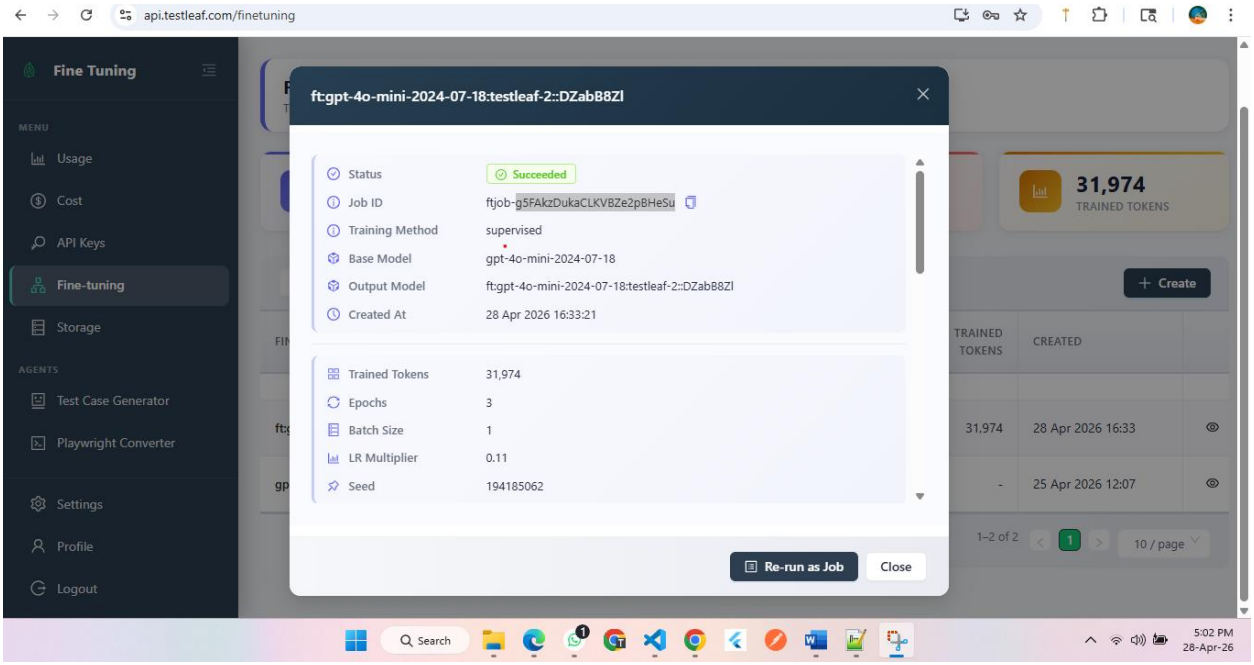
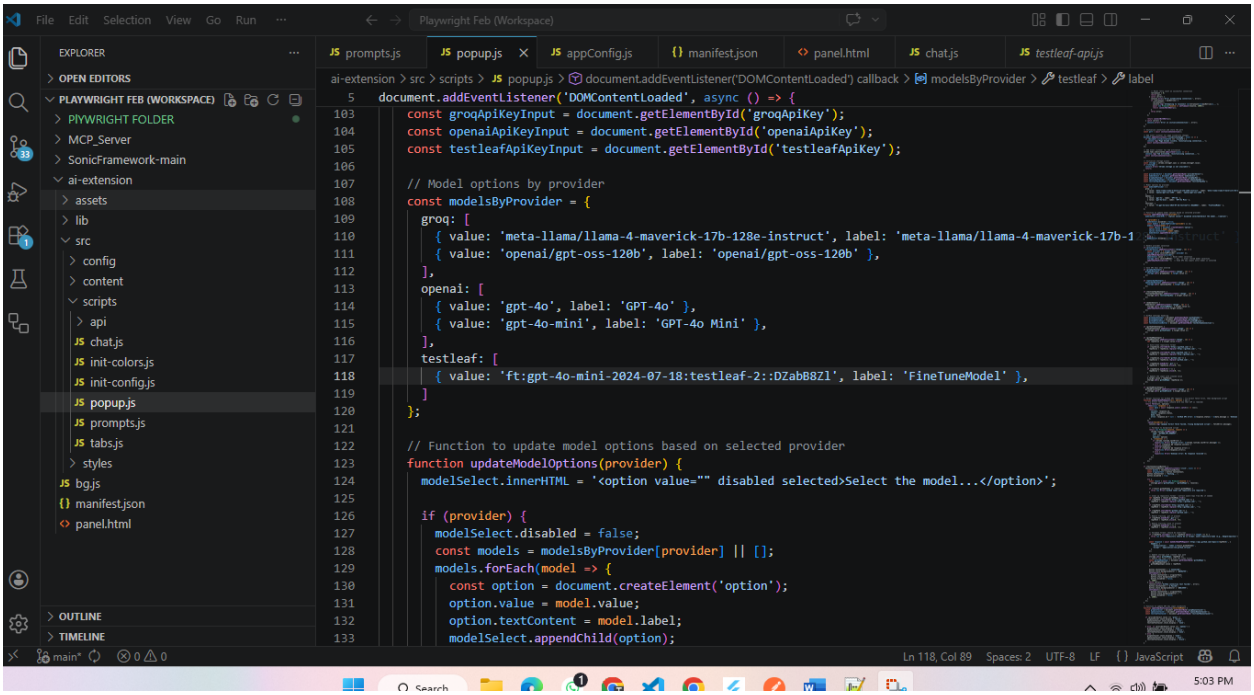
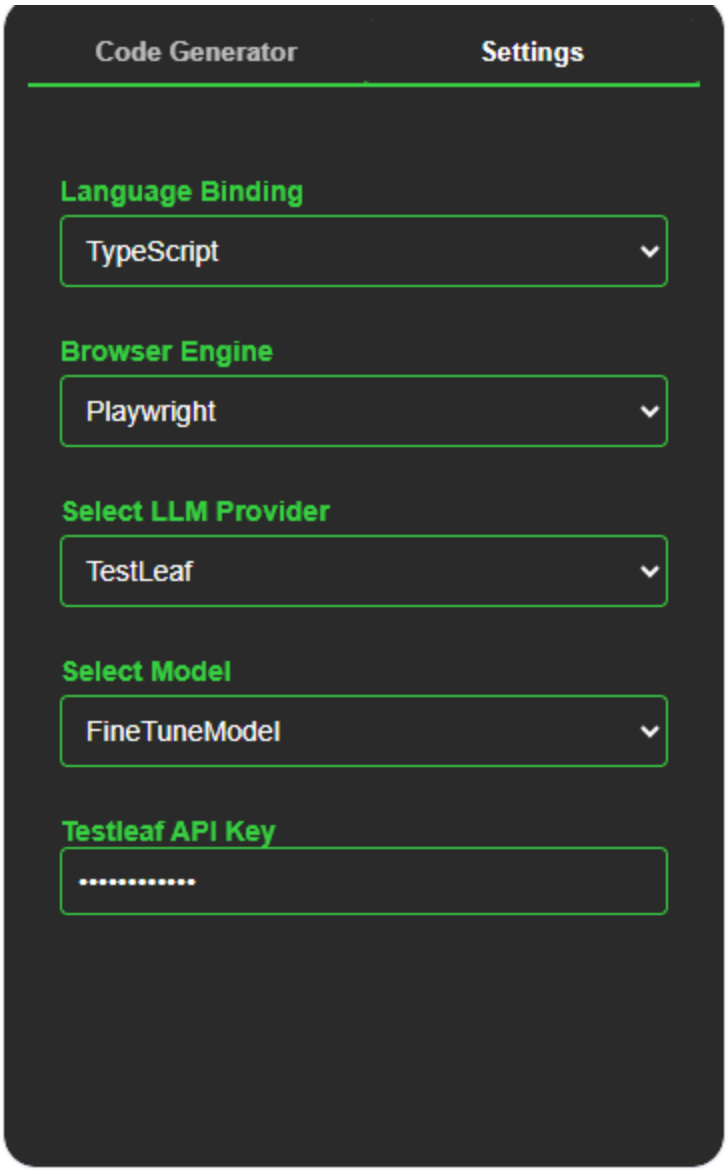
Run the jsonl file in the apitestleaf.com







Output scripts :

```
import { test, expect } from '@playwright/test';

class ContactMechPage {
  private page: any;

  constructor(page: any) {
    this.page = page;
  }

  async navigateToContactMech() {
    await
this.page.goto('https://leaftaps.com/crmsfa/control/viewContact?partyId=11527'
);
```

```
  }

  async enterAttributeName(attrName: string) {
    await this.page.locator('//input[@id="attrName"]').fill(attrName);
  }

  async enterAttributeValue(attrValue: string) {
    await this.page.locator('//input[@id="attrValue"]').fill(attrValue);
  }

  async selectContactMechType(type: string) {
    await
this.page.locator('//select[@id="createNewContactMechTarget"]').selectOption(t
ype);
  }

  async clickUpdateButton() {
    await this.page.locator('//a[contains(@href,
"contactsEditContactMech")]//img[@alt="Update"]').click();
  }

  async clickDeleteButton() {
    await this.page.locator('//a[contains(@href,
"javascript:document.deleteContactMechForm0.submit()")]//img[@alt="Expire"]').
click();
  }
}

test.describe('Contact Mechanism Tests', () => {
  let contactMechPage: ContactMechPage;

  test.beforeEach(async ({ page }) => {
    contactMechPage = new ContactMechPage(page);
    await contactMechPage.navigateToContactMech();
  });

  test('Update Contact Mechanism', async () => {
    await contactMechPage.enterAttributeName('New Attribute');
    await contactMechPage.enterAttributeValue('New Value');
    await contactMechPage.selectContactMechType('Address');
    await contactMechPage.clickUpdateButton();
    // Add assertions as needed
  });

  test('Delete Contact Mechanism', async () => {
    await contactMechPage.clickDeleteButton();
    // Add assertions as needed
  });
});
```
