

POC Idea: AI-Based QA Manager Daily Status Assistant Using Langflow

Overview

An AI-powered QA Assistant built using Langflow to automate daily QA status analysis, execution monitoring, blocker identification, and management reporting activities.

Objective

To reduce repetitive QA coordination activities, improve visibility into defects and execution status, and automatically generate concise management-ready QA summaries every morning.

Approach

- Implement a no-code AI workflow using Langflow
- Integrate with Jira, Azure DevOps, Jenkins, and execution reports
- Use LLM-based prompt orchestration for QA analysis and planning
- Analyze defects, blockers, failed executions, and deployment status
- Generate concise QA planning and management summaries
- Provide automated outputs through Slack, Email, or Chat channels

Key Functionalities

- Morning QA status summarization
- Open defect and blocker analysis
- Automation execution monitoring
- Build and deployment validation
- High-priority issue identification
- QA planning recommendation generation
- Risk and impact analysis
- Management-ready reporting

Sample Use Cases

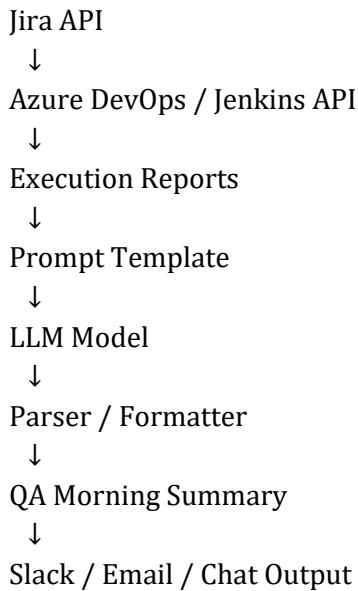

- Generate daily QA morning summary automatically
- Identify failed automation suites and critical defects
- Highlight deployment and environment blockers
- Track pending UAT and testing activities
- Summarize overnight execution updates
- Prepare concise stakeholder reporting

Expected Outcome

- Reduced manual QA coordination effort
- Faster daily QA status preparation
- Improved blocker and defect visibility

- Better communication between QA and management teams
- Early identification of execution risks and failures
- Foundation for AI-driven QA management automation

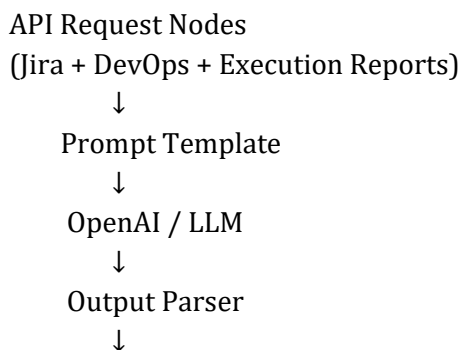

Flow Overview

Lang flow Components

- **API Request:** Fetch Jira defects, DevOps status, and execution reports
- **Prompt Template:** Create structured QA analysis prompts
- **OpenAI Model:** Generate AI-based QA summaries and planning notes
- **Parser:** Format AI response into concise management-ready output
- **Chat Output:** Display final QA morning summary
- **Slack / Email Integration:** Share automated reports with stakeholders

Recommended Lang flow Chain

Chat Output

Slack / Email Output
